

General Principle 3

Hawaii is a group of islands isolated in the Pacific Ocean.

Different species of Honeycreeper birds live on these islands.

The heads of four species of Honeycreeper are shown below.

What further information would be needed about the four species of Honeycreeper to conclude that they had evolved by adaptive radiation?

Descended from/Fossil evidence of/Share a
common ancestor

1

The alternatives shown by the forward slash / are:

- Descended from a common ancestor
- Fossil evidence of a common ancestor
- Share a common ancestor
