

General Principle 7(b)

The grid below shows adaptations of bony fish for osmoregulation.

A	few, small glomeruli	B	active secretion of salts by gills	C	high filtration rate in kidney
D	active uptake of salts by gills	E	low filtration rate in kidney	F	many, large glomeruli

Use **letters** from the grid to answer the following questions.

Which **three** adaptations would be found in freshwater fish?

Letters _____, _____ and _____.

1

Candidate could use the words from boxes C, D and F instead of the letters and be awarded the mark.
