

## Candidate 5

Nowadays there are many different methods to live in a friendly environment. I will illustrate some of them in this writing.

Nowadays we have more facilities in this world and with that we ~~for~~ tend to forget how to be environmentally friendly. We used to take minor thing for granted.

To resolve this problem we should start to make our small tasks more frequently. Energy at home is one thing that many people ~~don't~~ <sup>do not</sup> pay attention to it, and ~~it~~ end up to spend ~~lot~~ <sup>large</sup> amount of money just because they left their tap running, ~~or~~ left the light on, or leave their tv on. ~~Because~~ The world is changing and so people and habits, as students are increasing ~~this~~ this problem increase as well, because many students live alone and some of them are scared to be ~~alone~~ <sup>by themselves</sup> in a house, <sup>all temptis,</sup> so they tend to leave the tv on while they are doing other thing so that the noise of the tv will make them feel like somebody is with them, and that usually reassure them. //

I suggest that the power of technology might help us with this problem. There should be more smart tv or ~~some~~ electric tap <sup>and so on</sup> etc. etc. with that as soon as you finish to watch the tv, the tv will turn off by ~~its~~ ~~them~~ ~~himself~~ <sup>itself</sup> and the ~~same~~ <sup>same</sup>.

is for the tap where in some public places  
is already ~~be~~ introduced, so as soon as you  
take ~~you~~ off your hands from the tap, they  
will ~~stop running~~. automatically stop to run.

Overall <sup>it is</sup> ~~it's~~ all about ~~our~~ habits, ~~and~~ ~~at~~  
if we are going to change we can give ~~to~~ ~~choice~~  
an opportunity to this world if not the technology  
need to step in and solve our problems.
