

## Candidate 5 evidence

ENTER NUMBER OF QUESTION	DO NOT WRITE IN THIS MARGIN	
50.	<p>One thing people believe about the nature of god is that god is Omni-potent, this means he is all powerful which is understandable since how else would the world have come about it also makes sense since he created earth and everything on earth. People also believe that god is Omni-benevolent which means he is all loving, this means that god loves everyone on <del>the</del> earth <del>the</del> this makes sense since he is always open to forgive anyone and give them a second chance. Finally god is described as Omni-scient which means all-knowing this is true since <del>he</del> he is always watching over us and since he created the world we know that he knows everything about the world.</p>

51.	<p>the teleological argument which was created by William Paley who was a philosopher and a Utilitarian. <del>Suggest</del> suggests that everything in this world has a purpose and to describe this he uses the watch maker analogy which suggests that if you found a watch lying on a rock you'd automatically know that someone created it since it is too complex to create itself which reflects on the universe since it is so complex how can it <del>be</del> not have a creator this creator is God. Paley also uses the eye theory since an eye ball is so complex and without it it would be difficult therefore since humans didn't make them who did, this would also have to be God since we can't create working eyes only the creator of everything can and the creator is called God.</p>

ENTER NUMBER OF QUESTION	DO NOT WRITE IN THIS MARGIN

I agree to a certain extent since it does make a lot of sense in the fact that the universe is so complex that it is almost impossible it formed on its own since its not only the universe its also everything in it fore example humans and animals and all the other stuff is very complex. However i also disagree because there are many scientific facts to disprove this like the big bang theory and evolution since Charles darwin saw things adapting with his own eyes so maybe every thing just formed by itself without the help of god.

53.	<p>The cosmological argument is made by Saint Thomas Aquinas who suggests that everything in this world has a cause and nothing can be the cause of itself. Aquinas was made a Saint just after he died in the thirteen hundreds. His argument suggests that there are infinite amount of causes and God is the very first cause. <del>This is also called causation since nothing can be the cause of itself</del> This is also called causation since nothing can ever be the cause of itself everything has to have a cause because it wouldn't make sense otherwise and if you think about the first ever cause it has to be God since he created the universe. The cause of the universe was <del>egg</del> God.</p>

54	<p>I disagree with this statement to a certain extent because it is proven to be wrong by Charles Darwin's theory of evolution. Charles Darwin explored different islands seeing the variation of species and he saw that a specific type of bird was evolving and adapting to the different types of habitat they were in. It is also disproven by the big bang theory since humans appeared after it and why would God willingly destroy what he worked so hard to create. If God was all powerful he would try to save our world and stop wars from happening but he doesn't. So why would we believe he could actually exist since he isn't helping or doing anything to help our planet. Finally if according to the cosmological argument everything has a cause <del>and</del> it would mean that God needs a cause.</p>

ENTER NUMBER OF QUESTION	DO NOT WRITE IN THIS MARGIN
	<p>However on the other hand I agree with this statement because of the teleological argument as the world does seem way to complex to just appear without cause which also leads into my other argument which is to do with cosmological since everything has a cause and god is the cause of us it would make sense why he gave us stewardship of the world and its because he trusts us not to mess this up. It would also make sense if god created the big bang as it helped humans become who they are now. also if you think about causation and evolution there had to be something that caused evolution to happen and that would be god.</p>
