28)	<p>assisted suicide, this is when doctors supply patients with the means to end their life which is usually painless. Euthanasia this is when a person is put down but this is usually completely painless which is why many people opt for it and fight to obtain the right of it here. Hospices, this is where people are cared for and looked after inside an area which has personal belongings to make the person feel more at home, they even allow patients to become day patients + return to home at night, hospice <del>care</del> care is for those who don't have long left but still things they want to do or complete before passing, hospice care says "we can't add <del>the days</del>, <del>but we</del> <del>can</del> add days to your life but we can add life to your days" which ensures patients they're going to be looked after to fit their condition</p>

29)	

hateful towards a person who wants to die as it's their decision and God gave us free will + ~~with~~ intelligence so we can make these decisions and we should instead be compassionate to help them with those decisions and support them.

it ~~raises~~ <sup>raises</sup> moral concerns as it devalues a human life + tells people that their life ~~isn't~~ isn't as important as other people's lives, it also sends the message to elderly people that they would be better dead and not a burden to their family anymore. It ~~is~~ is against doctors' oaths and so the public could potentially lose trust in doctors as they could be killing off patients to make spare beds available. Also it sends the message that it's better to be dead than disabled which ~~isn't~~ isn't true as

MARGIN

~~There~~ there have been many ~~great~~ great people like Stephen Hawking who was disabled ~~but~~ but that never stopped him achieving ~~great~~ great things.

30) One way embryos might be used is for IVF, which is where a couple can't get pregnant whether straight or ~~heterosexual~~ heterosexual as so IVF allows them to get that chance of having a child as it's virtual fertilisation and so they use ~~the~~ the sperm + mix it with the egg of ~~a~~ a willing surrogate to help ~~through~~ the pregnancy go through.

Saviour sibling, this is where the main sibling is sick or has a disease, a saviour sibling is born merely to be spare parts for that sibling, this then decreases the chance of the main sibling dying as ~~the~~ the saviour sibling

~~Was~~ was made solely for them  
and so their DNA is very ~~similar~~  
similar, this is good as it ~~saves~~  
saves a child but on the  
other hand it devalues the serious  
siblings life as they feel only  
like spare parts.

b) on one hand I agree as you  
can use embryos for research which  
allows a better understanding of  
how to develop them and be able  
to fix the ~~embryos~~ embryos from  
any blood or family disease  
or sicknesses which could ~~potentially~~  
~~threaten the life later on~~ potentially  
threaten the life later on.

Reproductive use, this allows couple  
who are unable to conceive  
have a baby as the advanced  
research is capable of ~~understanding~~  
understanding the underlying  
issues of the pregnancy not happening +

ENTER NUMBER OF QUESTION	DO NOT WRITE IN THIS MARGIN
<p>so they use the father's sperm sample <del>to</del> introduce it to the egg which allows the pregnancy to take place <del>as</del> even if the couple aren't carrying the baby, they are still its parents as one of them are biologically related to the child. and so that can former already known knowledge about embryos later on so that these practices are safer + more effective. On the other hand I disagree as the embryo research could turn into a slippery slope of designer babies which is  frowned upon in today's world as it's morally wrong to change the naturalness of the unborn baby. It's also very expensive to pay for IVF <del>as it's</del> as it's a more private practice to receive <del>and</del> and most of the public don't require this as it is seen as morally grey. Also a sibling could feel as though their life doesn't</p>	

ENTER NUMBER OF QUESTION		DO NOT WRITE IN THIS MARGIN
	<p>have a purpose other than to help their sibling to survive by donating <del>the</del> themselves as help which can make the senior sibling emotionally detach and feel depressed. <del>As</del> Finally any left over embryos being used for research, eventually get discarded of &amp; that is seen as killing a potential life which <del>many religions</del> Christianity &amp; humanism are against.</p>
