ENTER NUMBER OF QUESTION	<p>3/1a The Big Bang theory is mostly believed by scientists. The BBT explains that the universe was once an infinitely hot, infinitely dense and infinitely small thing called a singularity. The singularity then rapidly expanded and cooled, which brought space, time and matter into existence. The BBT was first explored by Georges Lemaitre he named it the hypothesis of the primeval atom. In 1929 Edwin Hubble exp saw the universe was still expanding and saw a red fringe towards the end of the spectrum of far away galaxies. This is called red shift.</p>	DO NOT WRITE IN THIS MARGIN

34b	<p>Liberal Christians accept the Big Bang theory but believe still believe God to be the creator. They believe it was God's way of a creating the universe. Literal Christians however don't accept the a BBT. They strongly strongly believe that God are created the universe and everything in the ^{genesis} it happened as it says. Literal at Christians take Genesis one literally.</p>
35	<p>People may believe in evolution because of Charles Darwin. Charles Darwin travelled to the Galapagos islands and on each each of the islands there was a different type of finch with a different type of beak. Darwin the thought of the theory of evolution because of what he saw. He believed that natural selection had taken place. He</p>

thought this as each island had a different beaked finch. He originally thought ~~though~~ thought that God created a different beak for each island. ~~But~~ Then he realised that each bird's beak had adapted to fit its environment. The beak was dependent on what type of food ~~the~~ each finch ate.

36a M One creation story is the Genesis one. Christians are most likely to believe in Genesis one. ~~The~~ Most believe that God created the world in 6 days. The first 3 days he formed the world and the last 3 days he filled the world. God spoke his creations into existence. God created humans last to show that ~~that~~ they are the most ~~the~~ important. Humans were also created in His image. He created them.

male and female he created
them. Genesis 1:27.

366 Most Christians would disagree
with the fact that science proves
the creation stories can't be
true. ~~was~~ This is because most
believe that god is perfect and
he can't make mistakes but
humans can. They may think
that all the scientists have made
mistakes as its in human nature,
~~the~~ Literal christians also believe
the word of god to be inerrant,
~~mean~~ meaning he can't be wrong.
This is a strong argument as
humans make small mistakes all
the time. This is a weak argument as
there is no ~~the~~ ~~a~~ proof of
god, so how god be perfect if
he doesn't necessarily exist.

Some scientists would agree
with creation stories being proved

wrong as ~~there~~ there is multiple pieces of evidence for the big bang theory. such as red shift, the abundance of hydrogen and helium on a cosmic background base noise. ~~the~~ however there is no evidence of god or genesis one or two happening *

I am unsure of how the universe may have ~~started~~ started ~~was~~ whether it was the BBT or genesis one but i do know that there is lots of evidence of the BBT which has been backed up several times.

* this is a stronger argument as there is a number of pieces of evidence for the BBT. This is a weaker argument as human error could of occurred during the experiments as ~~the~~ ~~same~~ the same experiment is done
