To fund	out how increasing particle size affects the rate of reaction
Underlyi	ng Cinemistry:-
The care	of reaction is now fast or slow a chemical reaction nappens. If the reaction
has a ny	gin rate, it is a fast reaction, and if it is a slow reaction it will have a low
rate of re	action. There are four main factors which affect the rate of reaction."
Amerika (1999) - 1990 - 1990 - 1990 - 1990 - 1990 - 1990 - 1990 - 1990 - 1990 - 1990 - 1990 - 1990 - 1990 - 19	-particle size
	- concentration
	-temperature
	- presence of catalyst.
TOWORK	cut the rate of reaction, use this formula: - rate = Aquantity
	Ânme
7, more	23 are lither audic alkaline or neutral. The pH of an audic substance is less the than 7 for an alkaline Substance, and equal to 7 for a neutral substance fore used to neutralise an aud The 3 main types of bases are "Metal axides
Addet fred til before all hed tall and termine	metal hydroxides
	- metal carbonates.
AU 3 1	ead to produce a salt and water, with an additional cos being produced
whenan	netal carbonate is be used. A neumalisation reaction can be shown in an
equation	as: - acid + base -) Sait + water (coz)
	$2H(L + (alog -) collet H_2O + (or$
As care	um carbonate was related with hydrochlonic acid, a carbon dioxide s
also pro	wared. To catch the Cor produced, the following method can be used:
HCL +	Weiword two mensuring cylinder

Different Sized par	hcies were added	to an acid, and the volu	me of gas produced wa
measured .	a, a,

the Medium-Sized particle had a medium-Sized bar showing that it isn't as slow as the largest particle nor as sto fast as the smallest. In my experiment, and the second source the jump from small to mealow is fairly big, whereas the jump from medium to large is a lot smaller.

Conclusion :-

From My investigation. I have found out that as the particle size increases, the rale of reaction decreases.

Evaluation : -

If any gas is lost after the particle is added to the add , it can now an affect on the results. To ensure that all gas produced is accounted for and theresults are more accurate, a stopper is placed on top of the test tube as Soon as the chips are added to the add.
