

Candidate 3 – Study

The evidence and commentary for this candidate were used within the ESOL N5 webinar in January 2021.

In this essay I'm going to write about using technology in everyday life. is the impact positive or negative?

Firstly, some say that using technology is bad and some say that's good because if we didn't have technology then we won't know what's going on in the world.

secondly, the use of social media. most of the student's say that social media is good because they can contact with people the same age as them and also they can contact their family members. But social media can be bad to for example people can get hate in the comment's, they can get bullied or just get nasty things written

about them. And that can hurt someone.

Thirdly, using technology is good because we use internet to research information that we never learn in school's. or just to do some revision on a subject that were studying

lastly, concentration, some say that while there studying for a subject and they get a text from there friend, they just lose concentration and they get distracted very easily. And they forget what they were doing.

in my opinion using technology is good because we can learn new thing and get more information.
