

## Candidate 3 evidence

### Part 2 - Study

Many people believe that school children should be taught about many significant things like growing vegetables and taking care of animals. <sup>vegetables</sup>Vegetables growing is a very important thing. ~~and is also~~ Growing also reflects on what young students may go through as well <sup>in the</sup> ~~in the~~ future. :

Every living thing on this planet is expected to grow. Growth is a vital aspect of our lives. It is a ~~form of our~~ identity, ~~growth reflects on the confidence whether whether~~ What is something humans can not live without? ~~food~~ <sup>Food</sup> ~~vegetables~~.

Did you know that most foods that we eat are all grown? <sup>vegetables</sup> Take ~~fruits~~ for an example, each <sup>vegetable</sup> fruit is grown, whether <sup>cabbage</sup> its an ~~apple~~ or <sup>zucchini</sup> ~~or banana~~, it must be grown first. Teaching kids about growing vegetables is vital as it is something that would benefit them in the long run -

~~on the other~~ How many of us have pets? Showing affection is something that is in human nature. Studies show that humans are much affectionate and loving towards animals, <sup>than anything else.</sup> Taking care of animals is a very important thing to teach kids as it ~~build up~~ helps in building up their character by teaching them positive traits, like showing

kindness, ~~Some~~ <sup>A</sup> great gesture one must show to everyone, and ~~it's something that they can keep on to for the rest of their lives.~~

Both these ~~at~~ things are very important to teach kids as they are very necessary ~~in this d~~ and relevant in today's society, ~~and~~ they also teach kids responsibilities. Looking after a pet or growing vegetables isn't an easy thing to do. Even many adults may fumble. You have to make sure you're planting in the right place, ~~enough~~ enough water is given, animals must be fed on time, they need to be groomed and treated properly. Teaching kids these things would make them responsible young adults. ~~and~~

Active outdoor learning is vital for every young child, ~~as~~ even if it is only for a little bit like an hour. Researchers show that the younger the child the <sup>more</sup> ~~more~~ time he should spend in the outdoors.

On the other hand, ~~However~~ many people may disagree with the idea of teachers adding vegetables and animals into the curriculum as they ~~may~~ see no need for it. Many <sup>parents</sup> ~~people~~ would agree that these are important things but they may view this as something that they can teach their children themselves and
